Summary

Final-year Computer Science & Engineering student specializing in Python, Machine Learning, Generative AI, Retrieval-Augmented Generation (RAG), and LangChain. Experienced building LLM-powered applications with vector databases and data libraries such as NumPy and Pandas. Seeking an AI/ML or GenAI developer internship.

Education

B.Tech, Computer Science & Engineering — Expected 2027
M. S. Bidve Engineering College, Latur (DBATU, Lonere) — CGPA: X.XX/10

Technical Skills

- **Languages:** Python, SQL, C (Basic)
- **GenAI & LLM:** Generative AI, RAG, LangChain, Prompt Engineering, Embeddings, Semantic Search, AI Agents, LLM APIs (Groq, OpenAI, Gemini, Ollama)
- **Data & ML:** Machine Learning, NumPy, Pandas, Data Analysis, Data Preprocessing
- **Vector & Databases:** ChromaDB, PostgreSQL
- **Backend & Tools:** FastAPI, REST APIs, JWT Authentication, Git, GitHub, Cursor, Kiro

Projects

RAG Study Assistant | Python, LangChain, GenAI, ChromaDB, FastAPI, PostgreSQL — 2026

- Building a RAG-based study assistant where students upload PDF, PPTX, and DOCX notes and ask questions answered with page-level citations.
- Designed a LangChain retrieval pipeline with document chunking, embeddings, and ChromaDB vector search for grounded, context-aware answers.
- Implemented summarization, MCQ generation, and previous-year question paper trend analysis using LLMs.
- Created a swappable LLM provider layer (Groq, OpenAI, Gemini, Ollama) with a FastAPI backend and JWT authentication.

AI Web Designer | Python, GenAI, LLM APIs, Prompt Engineering — 2026

- Co-developed a Generative AI system that creates website designs from natural-language user requirements.
- Worked in a team of three under faculty guidance, applying prompt engineering to produce structured design output.

Nexus: Agentic AI Software Developer | Python, GenAI, RAG, AI Agents — 2026

- Designing an agentic AI software developer with a staged architecture covering model layer, tool use, code intelligence, RAG, and multi-agent workflows.
- Planning verification, memory, and evaluation layers to improve reliability of generated code.

Data Analysis Toolkit | Python, NumPy, Pandas — 2025

- Built a toolkit for data cleaning, filtering, aggregation, and numerical computation using NumPy arrays and Pandas DataFrames.

AgriSense IoT & WaterGuard System | Python, NumPy, IoT — 2025

- Designed a smart agriculture system that processes real-time soil moisture and NPK sensor data for automated water management.
- Presented the architecture and working model at the DIPEX 2025 state-level exhibition.

Leadership & Activities

- **Treasurer, GDC Committee** (Second Year): Managed financial records and budgeting for committee operations.
- **Project Presenter, DIPEX 2025:** Explained system architecture and implementation at a state-level exhibition.
- Regular Python and SQL problem-solving practice; building small AI applications to strengthen programming skills.
